Github github.com/andreobriennz

A full-stack developer with a passion for learning. Commercial experience developing with JavaScript, PHP, CSS and MySQL. Also enjoys developing with frameworks such as React, Vue, and Laravel. Frequently working on open source projects in CSS, JavaScript/NodeJS and Python. You can view the best work at <https://andreobrien.me>

SKILLS

FRONT-END

- Highly skilled in JavaScript (including ES6, React, Vue and NodeJS)
- Both commercial and open source experience in CSS and JavaScript
- Commercial experience testing websites with JavaScript
- Experience with multiple CSS frameworks

BACKEND

- Commercial experience using PHP on large websites including Zagga's lending platform, NZ Doctor and Pharmacy Today, as well as maintaining projects with Git
- Some experience with ExpressJS, cloud hosting and server configuration (LAMP and JavaScript/Node stacks)

WORK HISTORY

WEB DEVELOPER, [COMMUNICA](#)

Communica is a Drupal based web agency in Auckland which develops medium-large scale sites
Oct 2017 - Mar 2018 (6 months)

- Wrote JavaScript-based tests for Zagga and NZ Doctor
- Developed an open-source API library
- Developed and tested modules and email templates in Drupal
- Wrote and fixed existing CSS on a variety of websites

FULL-STACK DEVELOPER, [CREATIVE MONDAY](#)

Creative Monday is a freelancing web partnership I started with another developer
Dec 2016 - September 2017 (10 months)

- Full-stack development based on October CMS and Laravel
- Testing, quality control, and SEO

EDUCATION

[DIPLOMA IN WEB DEVELOPMENT AND DESIGN \(level 6\)](#)

Feb 2016 - Nov 2016

Vision College, Hamilton

[BACHELOR OF MUSIC \(level 7\)](#)

Feb 2010 - Jun 2014

Vision College, Hamilton

OPEN SOURCE PROJECTS

[SKELETON-FLEXBOX](#) and [KUBE-FLEXBOX](#)

These projects modernise existing CSS frameworks by replacing the traditional grid system with flexbox and adding additional functionality.

[SIMPLE-GULP-SETUP](#)

Simple-gulp-setup helps developers get started with the Gulp task runner by providing common functionality out of the box.

[DANCERACE-C3](#)

A PHP library of wrapper functions for Dancerace C3's REST API to get client information.

[INCLUDE-HTML](#)

Include-html is a JavaScript tool that provides an efficient way for developers to include one HTML file into another without requiring a back-end language.

[REMARKABLE](#)

Remarkable is a website generator built with Python. It lets people write content via a user interface or text editor, and compile that markdown into a single HTML file, complete with a nav, footer and custom styling.
